

Powerful hosted Identity and Access Reporting Save money and achieve compliance

The number one request from businesses
evaluating Identity and Access Intelligence is

“ Can you tell me who has access to what,
who gave it to them and for how long? ”

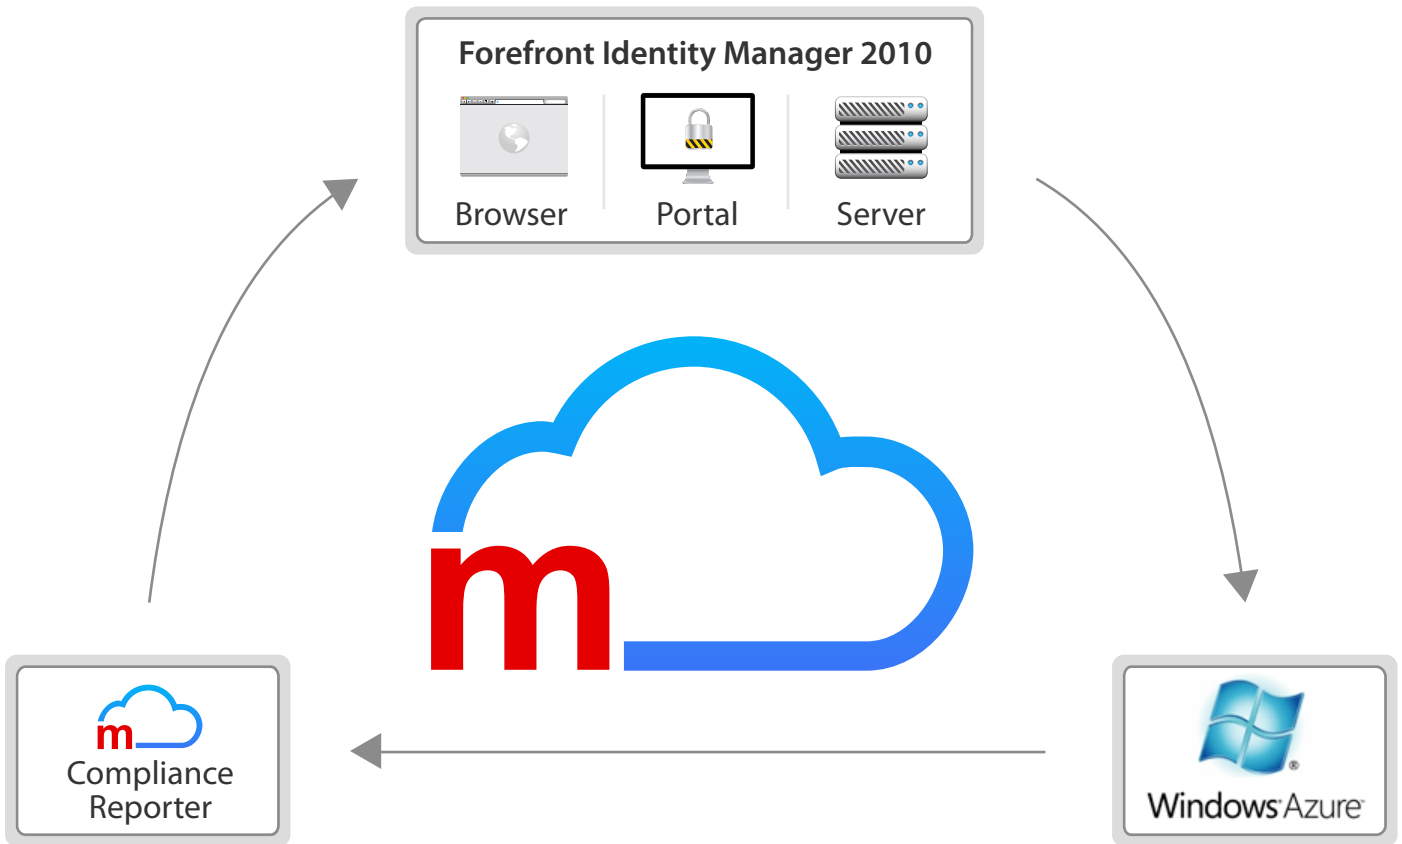

**Clear answers help managers make smarter decisions about
user identities and access control requests.**

Knowledge about who is using your business data is crucial for planning, implementing, and optimizing Identity and Access Management investments. Compliance regulations touch all sizes and types of businesses and real-time insight is critical to uncovering those risks and preparing for proactive remediation.

Metaconomy Compliance Reporter (MCR) teams with Microsoft Forefront Identity Manager 2010 (FIM2010) to provide the quick to deploy, easy to use, flexible, extensible, and comprehensive solution required by mid-market businesses.

MCR and FIM2010 are uniquely paired to offer a very fast return on investment, low cost of implementation, and the scalability to meet the challenges of increasing complexity in growing businesses.

How it works

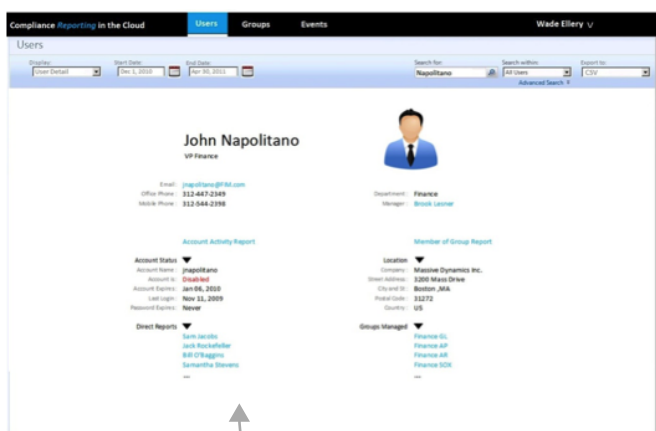

Benefits

Compliance Reporter is fast, easy and always available

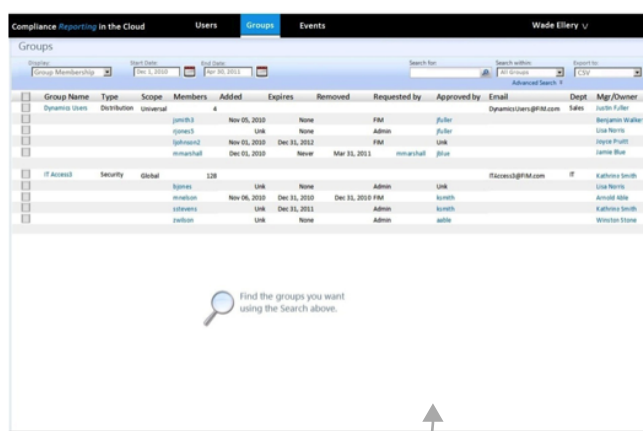

- ✓ Metaconomy delivers services and extensions to help customers meet regulatory compliance and corporate governance reporting requirements.
- ✓ Metaconomy delivers financial and operational efficiencies with the fastest to deploy, easiest to adopt compliance reporting service available.
- ✓ Metaconomy delivers an Azure-based reporting platform as a subscription service with a 30 day FREE trial and no upfront costs.
- ✓ Metaconomy delivers added value to FIM with a structured pathway to compliance that identifies policy and access violations.
